Please add your overall thoughts on the course and instructor.

Comments from Students:

1. Very interesting class, which helped increase my interest in the oil and gas industry. The set up of the class is a great mix of projects, quizzes, and outside class prep. Help is easily available, and Shannon seems to care a lot about how well her students are understanding the material. Best class I've taken!
2. Shannon is by far and above, my favorite teacher at Texas A&M. The way she presents her material and gains student's attention is incredible. I came into this class a bit wary of the material and difficulty, but she was very understanding of everyone's concerns and took the time to answer any and all questions. Her passion for the material itself just made the class that much more enjoyable to be a part of. Shannon is an absolute rock star of a teacher.
3. Unlike many other courses at the university, this course has very much real-life exposure. The knowledge that is gained from this course is extremely valuable to those seeking employment in the energy sector. Professor Deer utilized class time very efficiently and used several methods in order to simultaneously peak our interest and educate.
4. Great class, love your way of teaching, never got bored or wished the class would be over soon. Focus on projects and solving problems is great, way better to learn the actual material than MC exams Loved that I could do some actual audit work and you gave everybody the option to chose on what projects they want to do. I personally would like less time in class to work on projects and actually do them at home and come to your office hours if I have questions. Comprehensive exams were great, as everybody worked on the problems alone and then together in class asking you and other students questions.
5. Great teacher. Really knew what she was talking about. Very relatable with students and very engaging and easy to listen to. Only a couple of minor things I would tweak about the course. First, with regard to the pre-class case on reserves, on a few of the questions, I couldn't really find a straightforward answer. Maybe making that a little more clear and easy to follow would help. It just stressed me out a little bit. Also, on the ARO project, it was actually very easy to just copy the formulas when looking at the prior year examples. I still tried to understand what was going on, but if a student just wanted to get the grade, he/she could complete 99% of it

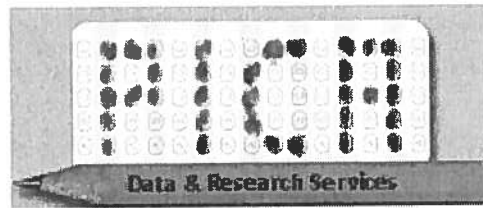

just by copying those formulas and wouldn't get much out of it. Other than that, great course and fantastic professor!

6. I really enjoyed this class!
7. Great teacher, hands down one of the best teachers when it comes to making you want to learn, and presents material at a high level each day in class

Comments from Students:

1. Overall I enjoyed this class and teacher
2. The course was interesting and the teacher was always willing to help. If I had the opportunity to take another course from this teacher I would.
3. Great course. It should be a required course for TRIP students and anyone else entering the oil & gas industry. Shannon does a phenomenal job!
